

# MR Dial

## Powder Measure Adjustment Dial for your Dillon Powder Measure

As a reloader, expert or novice, you are probably familiar with Dillon Precision Products, Inc. Dillon has a reputation for making the highest quality reloading equipment available. If you own a Dillon Powder Measure, this new dial will further enhance the ease of your reloads.

### Before MRDial:

Adjusting the powder measure can be tedious. Once you have it set, you are not as willing to change your setting for testing other loads or just tweaking your setting. Here are some of the stock features:

- Wrench is needed for any kind of adjustment and it will have play/slop making fine adjustment a nightmare.
- No reference point while adjusting. No Scale measure.
- Purchasing multiple powder bars or measures just increases the problem and can get expensive.
- Requires you to remember which way to turn to add or remove powder.
- Mass production of stock bolt results in 99% of bolts being bent, thus causing excessive wear and inconsistent loads.

### After MRDial:

Now, adjusting your powder measure will be a snap. Adding our dial will allow you the ease of hand adjustments. Here are the advantages:

- No Tools (Wrench)
- Numbered graduations to give you reference and let you know which way to turn to add more powder. The larger the number the larger the charge.
- Every graduation will move the slider 1/1000 of an inch. This actually tells you how fine of an adjustment you have.
- Improved new bolt. (Start out with our own bolt. First we make sure that it is straight. Chase the threads on a lathe to clean them up. Cut the shoulder, then drill and tap the head to hold our dial.)

Most important this device was designed and built right here in the  
**United States of America.**
